(ii)-B- Particulars of investment of unutilized funds as on 31st December 2017*-(Source –Monitoring Agency Report dated 16th May, 2018)

Not Applicable - The Company has utilized the entire fund raised.

(iii) Reasons for deviation, if any:

In view of the competitive environment of the industry in which our Company operates, our Company may have to revise its business plan from time to time and consequently its capital requirements may also change. The Company's historical capital expenditure may not be reflective of its future capital expenditure plans. The Company may have to revise its estimated costs, fund allocation and fund requirements owing to factors such as economic and business conditions, increased competition and other external factors which may not be within the control of our Company's management. This may entail rescheduling or revising the planned expenditure and funding requirements, including the expenditure for a particular object at the discretion of our Company's management.

Expansion and up-gradation of existing manufacturing facilities The Company at the time of IPO had envisaged increasing its manufacturing capacity through expansion and upgradation of its existing manufacturing facilities situated at Rohika and Una and had apportioned Rs. 1,474.80 million for the same. However, subsequently in order to achieve certain cost and tax efficiencies, the Company decided to set up a new manufacturing facility for manufacture of key components of the Wind Turbine Generators namely Towers, Blades, Nacelles and Hubs along with associated and ancillary components at another place viz. at Barwani village, Madhya Pradesh. The funds requirements of new manufacturing facility were met from the term loans and internal accruals of the Company. In view of the increased capacity by way of setting up of new manufacturing facility at Barwani village, the Company did not fully undertake expansion and up-gradation of its existing manufacturing facilities and the Net Proceeds of IPO were not fully utilized.

Investment in subsidiary, Inox Wind Infrastructure Services Limited (IWISL), for the purpose of development of power evacuation infrastructure and other infrastructure development The Company had planned to make investment in its wholly-owned subsidiary, Inox Wind Infrastructure Services Limited for development of various Wind Sites in the State of Rajasthan, Andhra Pradesh, Madhya Pradesh and Gujarat for setting wind farms. However, due to various external factors beyond the control of the company, including, prevailing business conditions, change in state wind policies by the concerned State Governments, different wind patterns at sites, non availability of sites at reasonable terms, title defects, all the wind farm project sites, as were mentioned in the Prospectus could not be developed. Thus, the Company was not able to invest fully in its wholly owned subsidiary as envisaged at the time of IPO.

Issue related expenses The issue related expenses that were estimated to be apportioned to the Company were Rs.373.27 million, subject to finalization of the basis of allotment, as envisaged at the time of IPO. On finalization of basis of allotment, the issue related expenses actually incurred by the Company were Rs.322.22 million as against estimated amount of Rs.373.27 million.

The justification for the proposed variation in the Objects of the Issue – To meet the long term working capital requirements of the Company Under the earlier feed-in-tariffs regime which prevailed upto March 2017, State Governments specified fixed feed-in-tariffs for wind power, which varied from period to period. These feed-in tariffs were often announced after a considerable part of the year was over. Factors including uncertainty in the structure and amount of tariffs due to such late announcement of state wind policies, change of government policies relating to wind power projects caused considerable delay in IPPs finalizing their investment decision in wind power projects and also in getting financial closure for the same. This led to higher working capital requirements for the Company in both inventories and receivables. With effect from financial year 2017-18, the Ministry of New and Renewable Energy has introduced an auction based market for wind energy. This will lead to competitive bidding, lower cost of power and hence a larger market for

wind energy. The Government of India has set a target for renewable energy generation of 175 GW by 2022, of which 60 GW is expected to be achieved from wind power, as against the current capacity of 32 GW as of March 2017. Due to its inherent cost competitiveness, the Company expects to improve its market share in the wind energy market. The Company's expectation of a larger market and a larger market share for itself will increase the Company's requirements of long term working capital. In view of the reasons explained above, the Board of Directors of the Company considered it prudent to reallocate the unutilized amount of Rs. 1,715.60 million to meet the Company's current and anticipated long term working capital requirements during the current Financial Year 2017-18.
